NYU Langone named one of the top 10 hospitals in the country by *U.S. News & World Report*.

NYU Langone Hospital—Long Island's Turner Program is designed to assist pediatricians in caring for a child, teen and/or young adults with Turner's syndrome.

Our Endocrinology department leads a multidisciplinary team consisting of a Pediatric Endocrinologist, Pediatric Registered Dietician/Nutritionist and Pediatric Cardiologist, each of whom will be given the opportunity to meet and evaluate your child during a single scheduled session at two different locations. A summary with findings and suggestions will be forwarded to your child's pediatrician for evaluation and management of this genetic condition.

Our specialists evaluate and treat children under the age of 25 with a genetic diagnosis of Turner's.

The team will discuss plan of care for each patient to identify your child's specific needs and referrals. Following the assessment visit, the program coordinator will work with your family to set up recommended follow up appointments with NYU Langone Hospital—Long Island specialists.

New and expectant parents will be directed to our program coordinator who will set up your initial appointments as well as provide information regarding what our program has to offer.
